London, UK
Phone: available on request

PROFILE

Product-minded cybersecurity and software professional who listens first, finds what people or organisations are missing, and turns unclear or inefficient work into practical systems they can actually use.

CAPABILITIES

- Security engineering and OSINT
- Python, JavaScript and C#
- React, Express and Flask
- SQLite, Docker and WebSockets
- Splunk, Datadog and automation
- Product design and mentoring
- IT administration and operations

EDUCATION

MSc Network & Information Security
Kingston University - MyMark anti-abuse system

BSc Cyber Security & Digital Forensics
2:1, Kingston University, 2024

Dissertation: How do we decide what devices we provide? Led directly to the Device Provisioning Toolkit.

A-Level EPQ: Security vs Practicality
Read dissertation | View presentation

I build what should exist

Useful systems shaped around real people and real work

EXPERIENCE

IT & Administration Support (Intermittent) Jul 2025-Present

GMT Electrical Services Ltd
Developed the company website and a working staff portal for timesheets, audit checks and job-card workflows. Supports day-to-day operations through email, invoicing, telephone enquiries and administrative coordination.

Project & Creative Director, Trustee May-Jun 2025

CERRF
Directed cybersecurity learning tools including Inspector and HackerGo; led workshops, product storytelling, UX/UI, GitHub integration and cross-platform MVP delivery.

Student Mentor & Teaching Assistant Jan-Mar 2025

Kingston University
Supported undergraduate labs in Splunk, Datadog, AI automation and cloud data systems; guided students through monitoring and Linux-based technical work.

Systems Engineer & Data Analyst 2023-2025

Lunarversal
Worked across Splunk and Datadog monitoring, Salesforce automation, GitHub access and tests, API configuration, OAuth and token-based integrations.

SELECTED BUILDS

Inspector
Institution-pilot cybersecurity learning platform combining story-led lessons, a block command editor, isolated Docker terminals and a beta Containerlab network editor.
[Express](#), [WebSockets](#), [SQLite](#), [Docker](#), [PASETO](#), [Containerlab](#)

MyMark
Master's final project: a decentralised verification and anti-abuse system designed to counter sextortion and image-based abuse through privacy-preserving media fingerprinting, signed receipts and exportable evidence.
[Python](#), [FastAPI](#), [Vue](#), [Electron](#), [SQLite](#), [Ed25519](#)
[Read dissertation](#) | [View presentation](#)

FlowCue
Public-beta local/LAN show controller that synchronises controller, performer and audience screens for churches, business presentations and live stages.
[React](#), [Vite](#), [Express](#), [Socket.IO](#), [SQLite](#), [Electron](#)

Device Provisioning Toolkit
Security-focused comparison and provisioning web app developed directly from the undergraduate dissertation 'How do we decide what devices we provide?'. It turns research into practical device selection and hardening guidance.
[Python](#), [Flask](#), [SQLite](#), [Graphviz](#), [Pandas](#)
