

SECURITY VS PRACTICALITY

AN INVESTIGATION INTO HOW SECURE A PC CAN BE MADE BEFORE IT BECOMES IMPRACTICAL

ORIGINAL PLAN

AIMS

- TO DEVELOP A PLAN TO BUILD THE MOST SECURE PC SYSTEM FOR ALL USERS
- TO RESEARCH PRACTICES, HARDWARE, SECURITY METHODS AND PRACTICES USED
- To

REVISIONS

- TO DEVELOP A REGIME FOR CONFIGURING AND BUILDING A SECURE SYSTEM FOR MULTIPLE USE CASES
- TO DEVELOP MULTIPLE PLANS FOR MULTIPLE USER CASES
- RESEARCH BASED ON THESE MEASURES, CONFIDENTIALITY, INTEGRITY, AVAILABILITY, SIMPLICITY, FEASIBILITY, SCALABILITY

PROGRESS TO DATE

Key Research

67,508,936 - The number of people in the UK 2022. 3.99m people made up the biggest group between 30 and 34 years old, where as the second and fourth biggest groups being 50 - 54 and 55 - 59.

According to Average share of daily internet usage in the United Kingdom (UK) as of June 2023, by age group and device, 65 - 75+ make up the biggest Tablet and PC/Laptop users. Showing that the older generation are big tech users and second most possibly vulnerable.

PROGRESS

- TO HAVE THE OUTLINE OF THIS DISSERTATION PLANNED.
- RAISE THE IMPORTANCE OF PRACTICALITY IN A SECURE DESIGN
- FIGURE OUT METRICS FOR DESIGNING A PRACTICAL AND SECURE SYSTEM

Key Objectives

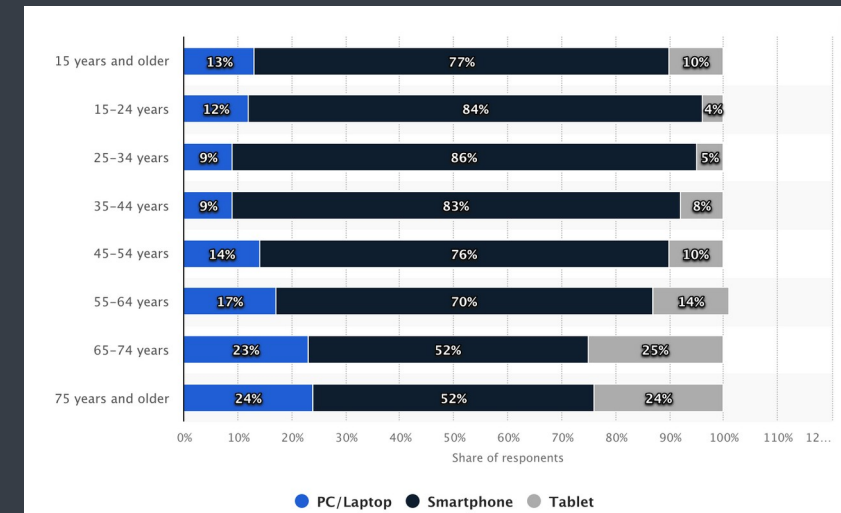

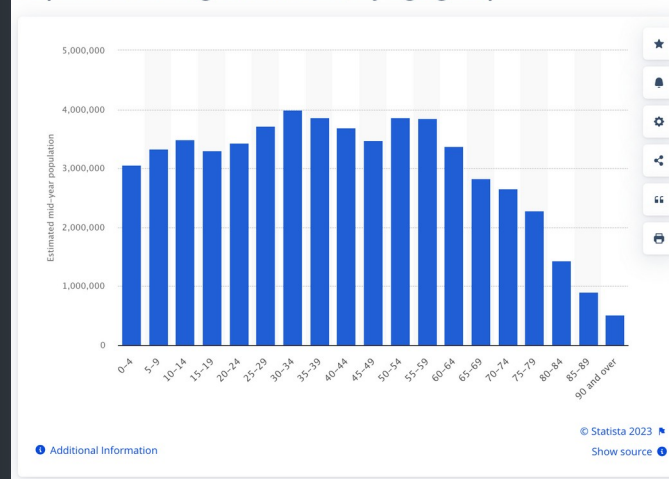

To have each section complete,
To do interviews on new system design,

To research secure vs insecure hardware

To research security methods used.

Aim to base this project on a practically secure windows machine based on key metrics.

Population of England in 2022, by age group

NEXT STEPS (INCLUDING RE- PLANNING)

- TO HAVE EACH SECTION COMPLETE,
- TO DO INTERVIEWS ON NEW SYSTEM DESIGN,
- TO RESEARCH SECURE VS INSECURE HARDWARE
- TO RESEARCH SECURITY METHODS USED.
- AIM TO BASE THIS PROJECT ON A PRACTICALLY SECURE WINDOWS MACHINE BASED ON KEY METRICS.

CONCLUSIONS

So far its been a lot of reading,
planning and re-planning

Need to spend time over
Christmas break finalizing a draft

Need to figure out a way to
implement security checks in a
simple user friendly way
