

Nathan Brown-Bennett

Cybersecurity | Software Development | Business Systems

Nathanbrown-bennett@hotmail.com | github.com/NathanBrownBennett | London, UK | Phone available on request

PROFILE

Product-minded cybersecurity and software professional who identifies unmet needs and turns unclear, inefficient or risky workflows into practical systems people can actually use. Bridges research, security engineering, product design and operational delivery, with experience building tools for organisations, educators and live environments.

CORE SKILLS

Security engineering; penetration testing; OSINT; GDPR; API and OAuth security; Python; JavaScript; C#; React; Express; Flask; SQLite; Docker; WebSockets; Splunk; Datadog; GitHub and CI/CD; technical mentoring; product design; IT administration; invoicing and operational support.

PROFESSIONAL EXPERIENCE

IT & Administration Support (Intermittent) - GMT Electrical Services Ltd

Jul 2025-Present

Developed the company website and a working staff portal for timesheets, audit checks and job-card workflows. Supports day-to-day operations through email, invoicing, telephone enquiries and administrative coordination.

Project & Creative Director, Trustee - CERRF

May-Jun 2025

Directed cybersecurity learning tools including Inspector and HackerGo; led workshops, product storytelling, UX/UI, GitHub integration and cross-platform MVP delivery.

Student Mentor & Teaching Assistant - Kingston University

Jan-Mar 2025

Supported undergraduate labs in Splunk, Datadog, AI automation and cloud data systems; guided students through monitoring and Linux-based technical work.

Systems Engineer & Data Analyst - Lunarversal

2023-2025

Worked across Splunk and Datadog monitoring, Salesforce automation, GitHub access and tests, API configuration, OAuth and token-based integrations.

Security Engineer - Xeyus LTD

2022-2023

Delivered penetration-testing support, security consultancy and GDPR-focused technical work.

Earlier experience: Volunteer & Application Developer, Mind in Croydon (2020-2021); Network Security Administrator, Mental Health Innovations / Shout UK (2018-2020).

SELECTED PROJECTS

Inspector

Institution-pilot cybersecurity learning platform combining story-led lessons, a block command editor, isolated Docker terminals and a beta Containerlab network editor.

Stack / focus: Express, WebSockets, SQLite, Docker, PASETO, Containerlab

MyMark | Dissertation | Presentation

Master's final project: a decentralised verification and anti-abuse system designed to counter sextortion and image-based abuse through privacy-preserving media fingerprinting, signed receipts and exportable evidence.

Stack / focus: Python, FastAPI, Vue, Electron, SQLite, Ed25519

FlowCue

Public-beta local/LAN show controller that synchronises controller, performer and audience screens for churches, business presentations and live stages.

Stack / focus: React, Vite, Express, Socket.IO, SQLite, Electron

Device Provisioning Toolkit | Dissertation | Presentation

Security-focused comparison and provisioning web app developed directly from the undergraduate dissertation 'How do we decide what devices we provide?'. It turns research into practical device selection and hardening guidance.

Stack / focus: Python, Flask, SQLite, Graphviz, Pandas

EDUCATION

MSc Network and Information Security - Kingston University | Final project: MyMark

BSc Cyber Security and Digital Forensics - Kingston University (2:1, 2024) | Dissertation: 'How do we decide what devices we provide?'

A-Level EPQ - Security vs Practicality | Dissertation | Presentation
